

HOW TO MANAGE BRAINSTORMING IN FIVE STEPS

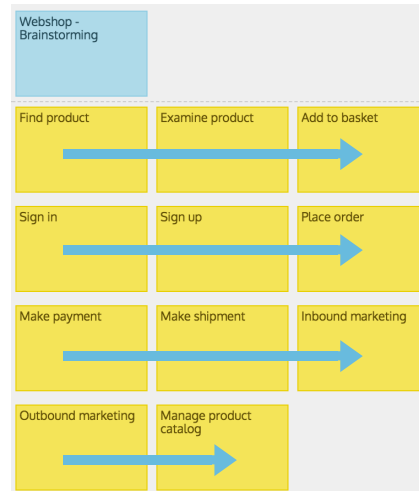

STEP 1

Switch to two level board view in the top right menu. This feature is designed to manage brainstorming.

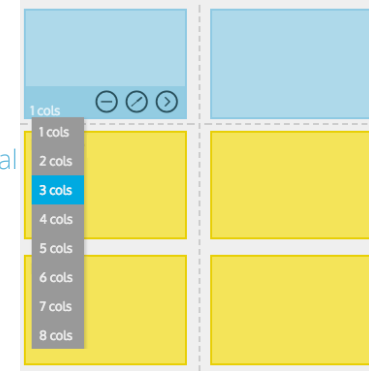

STEP 2

Create the first card on the top level, and ask your team to collect user activities. Place all ideas on the second level. Try to collect activities in the narrative flow to avoid missing steps.

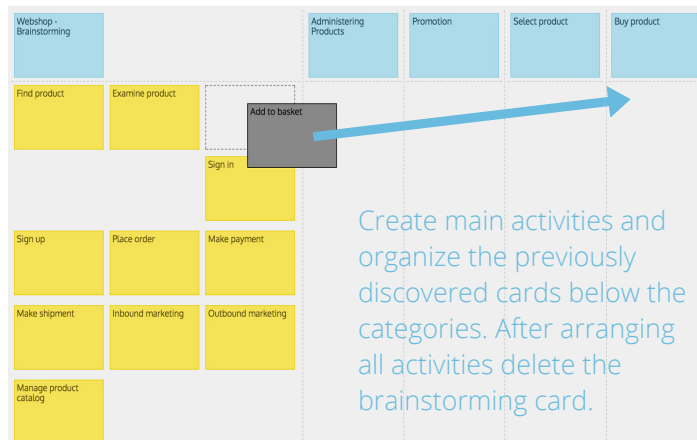

STEP 3

Set columns to avoid a long vertical list.

STEP 4

STEP 5

Switch back to three level view. Now you reached the product's backbone. The next step is to fill the backlogs body with tasks assigned to the activities. Continue the planning in the following way:

- Start a new brainstorming session to find the tasks.
- Split big tasks into smaller pieces.
- Try to find the holes or missing tasks
- Slice out the products releases
